NTware

Do your thing at NT-ware!

We are an innovation partner and integral member of the Canon Group. Our specialists around the world develop state-of-the-art software for our print and scan management operations located near the German city of Osnabrück. These developments are made from scratch through constant dialog with colleagues in New York, Singapore, and Tokyo. With our highly flexible working environment and our pioneering approaches regarding time, space, and equipment, we are a fount of ideas for newer and better solutions. Come and join our team in Bad Iburg, Germany.

LINUX SYSTEM ADMINISTRATOR – MONITORING & SECURITY (M/F/D)
THIS SOUNDS AMAZING!

Do you boast several years of experience in the administration and configuration of Linux ELK? And are you keen to implement and maintain our ELK stack – a platform key to the monitoring and log management of both our internal operations and our public cloud solution? Does your skill set include monitoring "healthy" Elasticsearch clusters, developing solutions to mitigate the risks associated with defined performance and service targets, mapping, and Query DS? And do you regularly develop visualizations/dashboards using Kibana and manage user permissions in a multi-space Kibana environment?

Are you at the beginning of your professional career? We are always on the look-out for new talent and would love to receive your on-spec application!

Of course!

Experience? Is something I'd like to gain with NT-ware.

At NT-ware, you'll meet a friendly technical and support team made up of delightfully easy-going people from over 35 nations. At each of our locations, we put our heads together to develop, test, and implement exciting ideas. By the way: What is your English like?

I love it!

English is not really my strong point.

With us, you can go all out.
– You'll prepare Elasticsearch, Logstash, and Kibana, test, maintain, and configure them, and ensure that they are always up to date.
– You'll assume the daily administration of Elasticsearch clusters and environments, including the associated resource planning work, and be responsible for infrastructural and configurational optimization.
– You'll also create Elasticsearch machine-learning jobs with a view to detecting anomalies in production datasets, and improve current machine-learning capacities.
– Last but not least, you'll manage multiple pipelines with different data sources, working to increase their performance and performing the associated protocol analyses.

No worries. We offer in-house language courses taught by certified instructors so you can quickly brush up on your English skills.

That sounds perfect. Is there any information about the perks and benefits?

I don't think this is the right job for me :(

That's too bad. Good luck with your job search!

Perks and benefits? Of course. We offer a super-flexible, highly modern, and well-equipped workspace with a company bonus plan, opportunities for continued professional development, driver safety training, work bicycle rentals, gym partnerships, work from home, electric height-adjustable desks if desired, and much more... Convinced?

Are you looking for more good reasons to join NT-ware? You can find more information about our corporate culture at **www.nt-ware.com/benefits**.

Definitely!
